

# Data-Intensive Systems

Bachelor project proposals 2022

Cigdem Aslay, Ira Assent, **Panagiotis Karras**, Davide Mottin

# Our research group

## Our interests

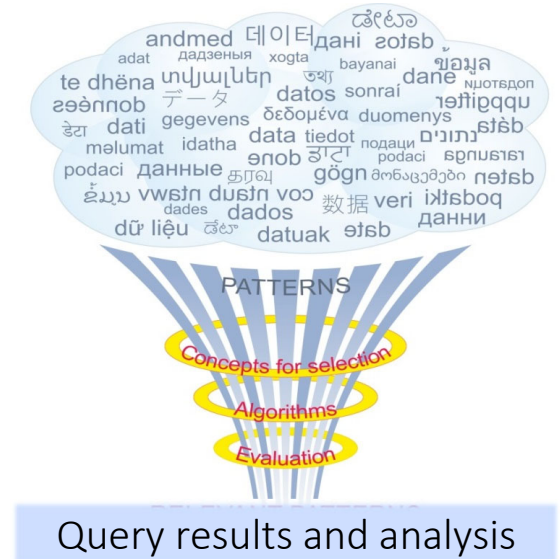

- Data management, data analysis, machine learning
- Efficiency and scalability
- Models and algorithms

## Our methods

- Formalize real world problems
- Devise concepts and algorithmic solutions
- Evaluate empirically

## Our tools and results

- Theoretical analysis and prototype implementations

# Projects in a Nutshell

Approximating Betweenness Centrality on Large Graphs

Creating and Personalizing Large Knowledge Graphs

SAGA: Scalable Algorithms for Graph Alignment

BeCom: Benchmark for community detection

Graph analysis

Efficient and Scalable Influence Maximization in Online Social Networks

Evolutionary games and spatial upstream reciprocity

Structural social balance under controversy

Similarity Search with Dynamic Time Warping

Interaction Models

Studying the fairness of ML models

ReliK: Reliable Knowledge Graph Embeddings

AI aspects

# Graph analysis

Algorithms for  
Approximating Betweenness  
Centrality on Large Graphs

How can we fast detect "broker"  
people in a social network?

BeCom: Benchmark for  
community detection

How can we easily evaluate  
whether two users belong to the  
same community?

Creating and Personalizing  
Large Knowledge Graphs

How do we create and maintain  
high-quality knowledge graphs  
for medical doctors?

SAGA: Scalable Algorithms  
for Graph Alignment

Can we find the same users in  
two very large social networks?

# Interaction models

Efficient and Scalable  
Influence Maximization in  
Online Social Networks

How do I compute fast the set of  
most influential users in a social  
network?

Evolutionary games and  
spatial upstream reciprocity

Why do we spend time, effort,  
and resources in cooperating  
with others?

Structural social balance  
under controversy

Can there be stability if  
controversial arguments are  
discussed?

Similarity Search with  
Dynamic Time Warping

How can we efficiently search time  
series under complex distance  
models?

# AI aspects

Studying the fairness of  
ML models

Imbalanced triads

flip

Is a ML algorithm fair? Can a  
machine be fair? Are there good  
models for fairness?

ReliK: Reliable Knowledge  
Graph Embeddings

flip

Is there any way I can be sure that  
my learned representation of a  
graph is actually correct?

# Structural Balance on Social Networks

Balanced triads

Imbalanced triads

"The friend of my enemy is my enemy"

"The enemy of my enemy is my friend"

- Implement and study the stochastic process
- How long until balance is reached?
- How does the distribution of friendships look at the end?
- Which graphs promote cooperation?

## Evolution of Cooperation on Graphs

		Not Guilty	Guilty
