Bachelor Projects in the Crypto and Security Group

Advisors:
Ivan Damgård
Claudio Orlandi
Jesper Buus Nielsen
Peter Scholl
+ possibly some of our postdocs

"Constructive" projects
- Build stuff: Implement solutions to concrete problems, analyse the properties of what you build, using the tools you have from dDistSec

"Destructive" projects
- Break stuff: analyse existing attacks, do them in practice, look at countermeasures.

In (almost) all cases: project can involve lots of coding, or virtually no coding at all.
