Computational Complexity and Game Theory group

Srikanth Srinivasan

Computational Complexity

- Computational Task

Computational Complexity

- Computational Task
- How much resource does it require?

Computational Complexity

- Computational Task
- How much resource does it require?
  - Time, Memory

Computational Complexity

- Computational Task
- How much resource does it require?
    - Time, Memory
    - Parallelism, Randomness

Computational Complexity

- Computational Task
- How much resource does it require?
  - ▶ Time, Memory
  - ▶ Parallelism, Randomness
- How to show problems are inherently hard for computation?

Computational Complexity

- Computational Task
- How much resource does it require?
    - Time, Memory
    - Parallelism, Randomness
- How to show problems are inherently hard for computation?
- Taxonomy of 'Hard Problems'.

Computational Complexity

- Computational Task
- How much resource does it require?
  - ▸ Time, Memory
  - ▸ Parallelism, Randomness
- How to show problems are inherently hard for computation?
- Taxonomy of 'Hard Problems'.Why?

Computational Complexity

- Computational Task
- How much resource does it require?
  - ► Time, Memory
  - ► Parallelism, Randomness
- How to show problems are inherently hard for computation?
- Taxonomy of 'Hard Problems'.Why?
  - ► Fun!

Computational Complexity

- Computational Task
- How much resource does it require?
    - Time, Memory
    - Parallelism, Randomness
- How to show problems are inherently hard for computation?
- Taxonomy of 'Hard Problems'.Why?
    - Fun!Is multiplication harder than addition?

Computational Complexity

- Computational Task
- How much resource does it require?
  - ▶ Time, Memory
  - ▶ Parallelism, Randomness
- How to show problems are inherently hard for computation?
- Taxonomy of 'Hard Problems'.Why?
  - ▶ Fun!Is multiplication harder than addition?
  - ▶ Cryptography

Computational Complexity

- Computational Task
- How much resource does it require?
  - ▶ Time, Memory
  - ▶ Parallelism, Randomness
- How to show problems are inherently hard for computation?
- Taxonomy of 'Hard Problems'.Why?
  - ▶ Fun!Is multiplication harder than addition?
  - ▶ Cryptography
  - ▶ Teaches us something about the world

Lens on the universe

Lens on the universe

- (Almost) Everything is a computer!

Lens on the universe

- (Almost) Everything is a computer!
  - The Brain

Projects

Projects

- Iannis Caragiannis: Envy-free allocation, Participatory budgeting.

Projects

- Iannis Caragiannis: Envy-free allocation, Participatory budgeting.
- Kristoffer Arnsfelt Hansen: Efficiency of broad class of optimization algorithms.

Projects

- Iannis Caragiannis: Envy-free allocation, Participatory budgeting.
- Kristoffer Arnsfelt Hansen: Efficiency of broad class of optimization algorithms.
- Srikanth Srinivasan: Random bits and how to save on them.

Projects

- Iannis Caragiannis: Envy-free allocation, Participatory budgeting.
- Kristoffer Arnsfelt Hansen: Efficiency of broad class of optimization algorithms.
- Srikanth Srinivasan: Random bits and how to save on them.

- Can modify projects to suit your interests!

Projects

- Iannis Caragiannis: Envy-free allocation, Participatory budgeting.
- Kristoffer Arnsfelt Hansen: Efficiency of broad class of optimization algorithms.
- Srikanth Srinivasan: Random bits and how to save on them.

- Can modify projects to suit your interests!
- We're on Nygaard 3rd floor. Come by and say Hi!
